

BMCC Ltd designed several steel structures for us.

Thanks to their experienced team and BIM technologies, together we were able to design several multi-story steel structures with a complex geometry. The projects included – 3D modelling of the basic geometry and the details, fabrication drawings, digital files and erection drawings.

The design process passed smoothly, thanks to the teams' devotion, good organization and communication. At all stages, 3D BIM models were submitted for checking and approval.

We would like to recommend BMCC Ltd. as a reliable and trusted partner for your future projects in the field of the residential and industrial steel constructions.
