## **REFERENCE**

We are pleased to recommend BMCC Ltd as a partner on your future projects.

SIDI Ltd has been using BMCC Ltd detailing services on a project for a new pipe rack in Amylum, Bulgaria. The project included all stages – steel detailing, fabrication drawings, NC files, steel fabrication and finally erection. We've managed to order the materials for the structure early in the design phase right after the initial 3D model was finished. This allowed the detailing team to work on, while the steel was being delivered. The communication between the fabrication and design team was smooth and led to faster understanding of the projects' issues. The design work on the project was well-managed.

The NC files for each element of the structure and our VOORTMAN-VB750+V613/1000M gave us a head start in the production, no drawings necessary.

With the help of BMCC's team we've managed to increase significant our productivity due to the usage of BIM technology and precise timing of each phase.

General Manager :

Ivanko Angov
