Recommendation Letter

LUDAN Engineering recommend Building Management and Consultancy Company (BMCC) Ltd as a company which offers outstanding services in particular Structural Design, Advanced BIM Modelling and creation of eligible manufacturing and erection drawings.

We had the good fortune of working with BMCC during the design of the several projects. The more significant ones is CONSTRUCTION OF MILLHOUSE, REFINERY AND UTILITY SYSTEMS FOR CAPACITY INCREASE FOR ADM AMYLUM”

With significant number design requirements which had to be met at the same time by each design solution we were able to see the professionalism and the wide range of knowledge in the field of steel structure design for manufacturing plants. Being aware with the specific requirements which wide range of structural design codes have and keeping up with the latest trends of the structural design in seismic areas are the main advantage of working with them. Those skills in symbiosis with their modern approach for completing structural analysis and advance BIM modelling brought significant contribution.

The design team supported each other seamlessly, worked diligently, and communicated well together to enhance the flow of progress. Comprehensive design reports, complete and accurate BIM models with clear drawings generated directly in them, were the end result of their passionate work.

With pleasure we would like to state BMCC team has ability to communicate and work collaboratively and unselfishly towards the common goal. If there is a challenge in the territory of steel design or BIM modeling they are the right company to team up with.

We highly recommend BMCC and its' team for your future industrial projects.

Dmitri MILITESCU
General Manager
